Art Unit: 2634

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-12, and 16-21, drawn to a dither code detector and the method of detecting a code composed of dithered codes, classified in class 375, subclass 150.

Group II. Claims 13-15, drawn to a maximum finding unit, classified in class 375, subclass 340.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

In the instant case the combinations of Group I and Group II are independent from each other because Group I is related to a dither detector and its method. It comprises: a correlator correlating the coded signal with a reference code (such as PN code); a detector detecting the long code based on the correlated signal (correlated/despreaded by the dither codes). Group II is related to a maximum finding unit, comprising: a first storage unit, a second storage unit, a third storage unit, a comparator comparing values in the first storage and a provided value to the comparator; and a multiplexer for arranging values stored in the first and second storage units according to the comparison result. They have different modes of operation, and have different functions. Inventions Group I and Group II are disclosed as different combinations which are not connected in design, operation or effect.

Art Unit: 2634

3. Because these inventions are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edith M Chang whose telephone number is 703-305-3416. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9314.
